

September 13, 2006

Dear Friends,

Did you know that it takes 15,120 drops of water to equal one gallon? That bit of information should come in handy the next time someone asks. Did you know that we have had to carry buckets of water to the office building for the past nine months? The supply line from the well ruptured again in Jan. This is the third (and final) time. It is almost 50 years old and just won't hold the pressure any more.

We really need to get started before the snow starts to fly. We are going to eat this elephant in three phases.

1. Get the new line from the well to the building now while the weather is still good. Bring it into the building in the basement and put a shutoff valve on it. The man with the backhoe can be here in TWO weeks. Total cost - \$500
2. As funds are available (hopefully by Thanksgiving) put in a water softener and iron filter and replace the lines to the men's and women's bathrooms. Total cost - \$1,200-1,500
3. As funds are available (hopefully by Feb) replace the lines to the kitchen. Total cost - \$300

At this point we are trusting the Lord for phase one. We really need the money to at least get the water to the building before winter sets in. The rest of the work will be indoor work that could be done while the snow piles up outside. Pray with us that the funds will come in soon so that all three phases can be completed ASAP. If you know of someone who might be able to help, please mention this to them. All donations are tax-deductible. Perhaps the Lord has someone with a business out there that He has been blessing that would like to help.

You may feel that all you can offer is a drop in the bucket. Remember, it takes 15,120 to make a gallon. Every drop counts. Your drop added to others will get the water running before no time. Let's hit the bucket.

Blessings,

PS - Vicky saw a sign recently; "You are the salt and light of the earth. Now go out there and shake and shine." Good thought.
